

2.2.1 The institution assesses the learning levels of the students and organizes special Programmes for advanced learners and slow learners

Advanced learners: Advanced learners encourage and guide the slow learner peers to learn with hands on experience in the class and in industrial visits.

Advanced learners are encouraged to choose research-based projects during summer internships. This exposure helps students develop experimental skills, research temperament and team spirit. They also learn how to extract information from research papers, write a research report effectively and make a presentation. The college opens this internship opportunity to students of other College and University.

Alumni are invited for talks to encourage students.

Faculty members and advanced learners motivate by sharing their experiences.

For slow learners, teachers take extra classes to clear their doubts for theory and practicals.

Our students come from diverse socio-economic backgrounds. In order to improve their communication skills, remedial classes for English were conducted for them during the semester from July-December 2019. The following students enrolled for these classes.
